

Portfolio of Web Based Projects (continued)

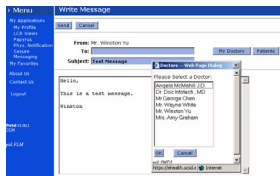

WebDiabetes

Diabetes Management Application

WebDiabetes is a Diabetes Management application. WebDiabetes collects information the Lab, Pharmacy and Managed Care system and then selects patients for Diabetes Management based on client supplied criteria. WebDiabetes manages multiple Medical Groups and automatically generates a Diabetes Review Record for physicians and case managers with pertinent medical information.

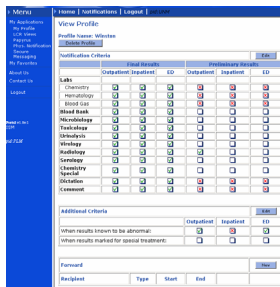

WebMessaging

Secure Enterprise Clinical Messaging Application

WebMessaging is an easy to use, secure clinical email application that can facilitate Physician to Physician and Patient to Physician messaging. Physicians can manage which patients can message them. Messages can be forwarded to other medical staff for response. Notification of messages can be delivered via SMTP, SNPP and SMS. All messages are logged and can be made part of the patient medical record. Management reports can be generated to insure those patient questions are processed in a timely manor.

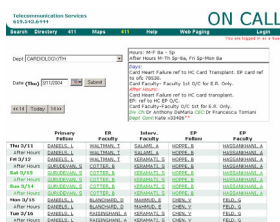

WebNotification

Results Notification and Review Application

WebNotification is a flexible enterprise-wide application that provides real-time notification of lab results and events. WebNotification collects information about events from real-time HL7 interfaces and notifies Physicians via SMTP, SNPP and SMS, based on custom Physician profiles. Enterprise profiles can override Physician profiles. Profiles also include workflow to allow forwarding of notifications to other Physicians or medical staff. Physicians can then log into WebNotification to review the event. Audit information is tracked and management reports can be generated.

WebOncall

Oncall Scheduling Application

WebOncall is an easy to use On Call Scheduling application. On call schedules can be searched by department and date to display special notes, and a 14 day schedule of who is on call for that department / subspecialty. The intuitive user interface allows you to hover over a name displaying the pager number for that physician. Clicking the name, allows you to send a page or text message via WebPaging to that Physician. Each department can update their own on call schedule independently.

WebPaging

Paging and Simple Text Messaging Application

Webpaging is an easy to use text paging and simple text messaging application that allows users to search by name, department and number to create a text message that can be delivered to a pager or cell phone. Messages are sent via SNPP, SMTP or TAP transports with full message auditing enabled. Management reports include a paging system results reports that displays how many pages were sent, which transport they used and if there were any error or retries.

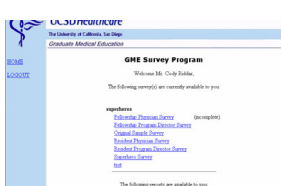

WebReferral

Physician Liaison Referral Service Application

WebReferral is a complete physician referral management application for both inpatient and outpatient referrals. WebReferral includes workflow management of the referral process and the automatic generation of Patient, Referring Physician and Refer to Physician letters. WebReferral includes a series of operational management reports which covers Insurance, Compliancy, Specialty, Referring Physician and Referral Source as well as the ability to show trending reports by month for any date range.

WebSurvey

Online Survey Application

WebSurvey is a flexible database driven tool for creating, deploying and collecting online surveys. WebSurvey automatically generates surveys based on a database of client supplied questions. Workflow management includes managing email lists to invite survey takers, survey reminders and survey reports displaying the results. A survey can be stopped and continued at any point. WebSurvey can handle over 14 different question types and an unlimited number of questions for each question type.
